Hyperbaric Oxygen

Vantage® Mobile Services provides patient and quality focused, cutting edge services in a mobile setting enabling hospitals the ability to offer the latest technology to their patients and physicians. Through the collaborative effort of Vantage® Mobile Services and your facility, this technology can be introduced into your community to meet your patient needs in a cost effective manner.

Why Choose Vantage® Mobile Services

- The Patient is Our First Priority
- Over 25 Years of Mobile Technology
- The Latest in Mobile Technology at Competitive Rates
- Experienced Staffing
- Servicing Hospitals Nationally

A Quarter Century of Quality Health Care Services

Delivering Quality Cutting-Edge Mobile Technology to Your Community

MRI - Magnetic Resonance Imaging

Magnetic Resonance Imaging (MRI) is an advanced diagnostic imaging procedure which uses a magnetic field, radio frequency signals and sophisticated computers to produce multi-dimensional views of the body. These detailed images show the soft tissue, nerves, and bone structure of the body.

Vantage® uses the latest GE Short-Bore MRI, 1.5 T-Echospeed, to provide doctors with more than twice the detail and resolution compared to current Open MRI scans. Radiologists agree that detail matters when it comes to making accurate MRI readings and decisions regarding your well being. The Vantage® route services facilities in Northeast United States along with *interim MRI/CT units that serve hospitals nationally. **For more information, contact Angie Filley, Director of MRI/CT Operations at (800)715-1214; or (814)392-1406.**

**See Interim Services.*

Lithotripsy - Extracorporeal Shockwave Lithotripsy

Lithotripsy is a Greek word meaning “stone crushing” which precisely describes the technique. Externally generated shock waves harmlessly penetrate body tissues, but provide enough pressure on a kidney stone to disintegrate it into small granules enabling them to be excreted from the body. With this widely used technology, Vantage® services hospitals locally and regionally through contract service agreements and physician partnerships. **For more information, contact Rick Crady, Manager of Lithotripsy Operations, (814) 671-0353.**

PET/CT - Positron Emission Tomography / Computed Tomography

PET/CT is the newest, most advanced diagnostic imaging procedures used to identify cancer. It can also detect certain diseases of the heart and brain such as myocardial perfusion, myocardial viability, Alzheimer’s disease, and seizures.

Vantage® has assembled a PET/CT services team capable of understanding the changing nature of healthcare and able to adapt to an ever changing market. Vantage® gauges our success on achieving our goals in the areas of patient care standards, meeting the needs of the patients, physicians and community.

Vantage® believes that this focus on quality and customer satisfaction separates us from other service providers.

Our all inclusive “turn-key” service includes:

- No Minimums
- Radiopharmaceutical
- No charge for cancelled patients
- Image viewing workstation
- Vantage® held RAM Licensure
- All medical supplies
- Screening & Scheduling
- Comprehensive Staffing Model
- Over-read service
- Radiologist education
- Education & Marketing

For more information, contact Carrie Pappal, RN, BSN, Director of Vantage® Mobile Services at (412)309-0044.

Industrial Sleep Services

Vantage® Diagnostic Sleep Services specializes in the diagnosis and treatment of sleep disorders. With the state-of-art- equipment and registered sleep technicians, Vantage®’s goal is to educate the community and physicians on the effects sleep disorders can have on a person’s quality of life. Vantage® Diagnostic Sleep Services offers Administrative Support, Fast turn around times on sleep studies, Easy referral process and scheduling services. Vantage® services hospitals and free-standing facilities in NWPA, Ohio and Indiana. **For more information, contact Maggie Armstrong, LPN/RPSGT at (800)715-1214, ext. 3127, or (814)671-9585.**

Interim Services – RENTAL UNITS

Our Mobile Medical Coaches are dedicated units that give you accessibility to digital interfacing allowing direct transfer of data into your facility systems. We provide on-site planning, site inspections, CT and MRI technologist orientation and interim CT and MRI technologist services. Vantage® Mobile Services provides facilities with a seamless transition during new equipment installation, during equipment upgrades or to manage backlogs.

Rental CT Unit (Computed Tomography)

Vantage® Mobile Services provides facilities locally and nationally, with a fully equipped GE LightSpeed 16 VFX Mobile CT Scanner for short and long term rentals.

Rental MRI Unit (Magnetic Resonance Imaging)

Vantage® Mobile Services provides facilities locally and nationally, with a fully equipped GE Shortbore 1.5+ EchoSpeed+ whole-body MR system for short and long term rentals. **For more information, contact Angie Filley, Director of MRI/CT Operations at (800)715-1214 or (814)392-1406.**

Document Destruction Service

Through modern mobile services, Vantage® is able to destroy hundreds of pounds of confidential information. With easy and affordable pricing structures, Vantage® will customize service to fit your financial needs. We offer the ease of shredding weekly, monthly, quarterly or on an as-needed basis. Our shredding service provides a certificate of destruction certifying the time and date your materials were destroyed. **For more information, contact Joe George, Manager of Destruction Services at (800)715-1214 or (814)720-3703.**

Hyperbaric Oxygen Therapy (HBO)

Hyperbaric oxygen therapy brings state of the art therapy for chronic, non healing wounds. Patients are monitored at all times by a hyperbaric technologist and treatment response is evaluated by a UHMS trained physician in hyperbaric medicine. Transcutaneous oxygen monitoring is another unique service provided by Vantage® Mobile Hyperbarics Services as part of a complete vascular work up and the management of wounds. **For more information, contact Randy Poulson, Director of Wound Care and Hyperbaric Medicine at (814) 455-6124 or (814) 547-0087.**

BRAVO™

BRAVO is a non-invasive test for GERD, gastro-esophageal reflux disease, commonly referred to as heartburn. A miniature BRAVO pH capsule, the size of a gelcap, is attached to the wall of the esophagus. The BRAVO capsule transmits pH data via radio frequency to a pager-sized receiver worn by the patient. The BRAVO capsule naturally detaches off the esophagus after a few days and passes through the digestive tract. The data is interpreted by a physician to determine proper clinical treatment planning.

Manometry

Vantage® also provides Esophageal Manometry; a test that measures the motility and function of the esophagus. It is a tool used to help evaluate for swallowing disorders.

RFA - Radio Frequency Ablation

Radio Frequency Ablation (RFA) is a new technique for treating tumors localized to certain organs such as the liver, kidney and lungs. With this technique, relatively small probes are placed into the tumor and radio frequency (RF) energy deposited. The RF energy causes the tissue around the tip of the probe to heat up to a temperature where cells break apart and die. Since RF kills both tumor and non-tumor cells, the goal is to place the probes so that they destroy all of the tumor plus an adequate "rim" of non-tumorous tissue around it. **For more information, contact Carrie Pappal, RN, BSN, Director of Vantage® Mobile Services at (412)309-0044.**
